Subject: Consultation on Fuel Finder arrangements

Hello,

I am broadly in favour of the proposed arrangements for compliance and enforcement of the regulations on disclosure of fuel prices by motor fuel stations. I expect this will benefit us as we have a diesel car and live in a small town where fuel price competition is not as effective as it was when we lived in a city.

I would like to know whether the legislation can be extended to disclosure on costs for electric vehicle charging. I acknowledge that there are mobile phone apps that provide such information but these are not always up to date/accurate. Extending these arrangements to public EV charging facilities would benefit us as we also have an EV and use it for some journeys beyond the range provided by charging at home.

I have no objection to my name being disclosed but do not want my email address to be disclosed.

Regards,

[✂]
